## Subject:

**A Brief History of the EMC Antenna,  
and the Design and Construction of Antennas for EMC**

**Speaker:** Stu Kron, Sunol Sciences

RSVP is not required.

## Abstract:

One of the key instruments that we use in the day to day business of EMC design and testing is the antenna. The antenna is essentially a transition by which electromagnetic waves are radiated into free space or vice-versa. What is the history behind the development of the antennas we use today? What considerations were made for the antenna as it is used for EMC tests and measurements? Please join us and welcome Stu Kron of Sunol Sciences who will provide you with a glimpse into the background, design and construction of the EMC antennas we presently use today.

$$\nabla \times \vec{E} = - \frac{\partial \vec{B}}{\partial t}$$

$$\nabla \times \vec{H} = \frac{\partial \vec{D}}{\partial t} + \vec{J}$$

$$\nabla \cdot \vec{D} = \rho$$

$$\nabla \cdot \vec{B} = 0$$

## Bio:

Stuart Kron is an Electrical Engineer with Sunol Sciences Corporation, where he is responsible for antenna development and manufacturing. He holds a B.S.
